

Missed Calls...Lost Opportunity... No Cell Coverage Inside your Office?

The Problem

Can you talk on your Cell Phone in your office? If this is a problem for you, read on. It is estimated 30% of all cellular communication occurs indoors, yet many people cannot use their phone in buildings. There are many reasons for this, however, building construction is the major factor in blocking the signal used by mobile phones.

Have you ever switched your mobile provider in search of more bars? Industry data indicates that 36% of all customers switch from one provider to another each year. Perhaps you tried switching to a different wireless provider and still have a coverage problem. If you go outside your building, and the signal is good then you know what the culprit is. It's not the provider, or the phone, it's the building. We can help.

The Solution

We will come to your office and perform a site survey then a recommendation.

The solution is turnkey, we gather your requirements, design a solution, implement the solution, and gain your acceptance.

The equipment we use is designed for Commercial Buildings specifically for Cellular Communications. This coupled with a proven methodology and solid expertise deliver on our commitment to our customers cellular coverage problems.

Do you need More Bars?

You must be able to talk on your mobile phone outside for this solution to work. We recommend our maintenance program that covers equipment failure. More importantly it covers you when you decide to switch providers. The equipment is provider specific and we will switch it out under The maintenance program at no cost to you.

We want you to be totally satisfied with your solution, and be so excited you tell others about it.

So contact us for a site survey and a free quote. You will be glad you did.
